Team: Fantastic 5

Team leader: Aurimas Vižinis
Aurimas was selected as the team leader through a vote during a Discord meeting. Each team member had the opportunity to choose who they preferred as the leader, and the person with the most votes was selected. This method was chosen because it was quick, simple, and fair, allowing everyone on the team to have an equal say in the decision.

Team ambition

- Target Grade: 8. All team members commit to putting in the necessary effort (approximately 5h/week + 1-3h/week of group calls) to achieve this standard.

Set of decisions and agreements how we will work

1. All communications are held online
2. Team must have a group call at least twice every week on agreed upon time in advance
3. Workflow will be orchestrated in an **Agile** methodology.
    a. **Backlog Refinement:** The team lists and prioritizes tasks, features, or user requests.
    b. **Sprint Planning:** The group picks top tasks to complete in the next 1 to 4 weeks.
    c. **Execution:** Developers or team members work on the chosen tasks.
    d. **Review and Retrospective:** The team shows the work and discusses how to improve it.

Responsibilities and authorities of the team lead

1. Plan and organize - Set goals, tasks, and deadlines.
2. Assign work - Make sure everyone has clear responsibilities and a fair workload.
3. Coordinate - Ensure everyone's work fits together. Try to limit the amount of blockers.
4. Make decisions - Resolve disagreements and keep progress moving.
5. Accountability - Track progress and ensure the tasks are completed on time.

Key team rules

1. **Respect:** Treat every team member with courtesy and professionalism. Disrespectful behavior, including insults, bullying, discrimination, or personal attacks, is not acceptable.
2. **Reliability:** Honor your commitments, take responsibility for assigned tasks, and complete agreed work within the required deadlines.
3. **Communication:** Communicate clearly and openly, share important information in a timely manner, and raise concerns or potential problems as early as possible.

Key principles governing work distribution

- **Domain Categorization:** Tasks will be categorized by domain (Backend, Frontend, Architecture & ADRs, Data Management/Storage, and Testing/QA).
- **Centralized Backlog:** All work items, tasks, and bugs will be maintained in a single, transparent backlog [e.g., GitHub Projects] visible to all members.
- **Task Assignment & Selection:**
    - During weekly calls, team members voluntarily claim tasks aligned with their strengths or areas they want to learn.
    - Workload balance across members will be evaluated collectively based on task complexity, not just item count.
    - In the event of unassigned tasks or disagreements, the **Team Lead** will make the final assignment decision to ensure equal workload distribution.
- **Shared Accountability:** Testing, code reviews, and documentation are equal responsibilities shared by all team members, regardless of their primary feature assignment.

Capacity constraints

Each team member has defined their weekly availability, time limits, and specific schedules below:

Team Member	Time Availability
Aurimas Vižinis	5 hours/week (individual work) + 1-3 hours/week (group calls) Tuesday -> 8:00 - 15:00 Thursday -> Fully free Saturday/Sunday -> 15:00 - 24:00
Dominykas Pavlavičius	5 hours/week (individual work) + 1-3 hours/week (group calls) Monday -> 20:00 - 22:00 Tuesday -> 18:00 - 22:00 Thursday -> Fully Free Saturday/Sunday -> Fully free
Dominykas Nemanis	5 hours/week (individual work) + 1-3 hours/week (group calls) Monday - Friday -> 18:30 - 23:00 Saturday/Sunday -> Fully free
Robertas Šatkevič	5 hours/week (individual work) + 1-3 hours/week (group calls)
Domas Barauskas	5 hours/week (individual work) + 1-3 hours/week (group calls) Monday - Friday -> 18:00 - 23:00 Saturday/Sunday -> Fully free

Team meeting times and group work

- The team will spend approximately 6-8 hours per week on online meetings and collaborative/individual work.
- There should be at least 1 meeting per week.
- Sessions will be used to discuss project progress, assign and coordinate tasks, solve problems, resolve blockers, make important decisions, and plan upcoming work.
- Additional individual work may be completed independently between meetings.

Tracking Progress

Team progress will be managed using GitHub issues and GitHub project board. Our progress will be measured by completed issues, reviewed pull requests, resolved blockers and knowledge sharing.

Sanctions and punishment within team for breaking team agreements

1. First Breach: Reminder, discussion, and corrective action.
2. Repeated Breach: Formal warning with clear expectations.
3. Continued Breach: Reduced responsibilities or agreed consequences.

AI usage

AI tools will not be used for the architecture/design part of the lab but will be rarely used for assistance during the second, coding part.
